ELSEVIER

Insurance: Mathematics and Economics 14 (1994) 293

INSURANCE
MATHEMATICS & ECONOMICS

Author index Volume 14

(The issue number is given in parentheses)

Berg, M.P. and **S. Haberman**, Trend analysis and prediction procedures for time nonhomogeneous claim processes (1) 19– 32
Dannenburg, D., Some results on the estimation of the credibility factor in the classical Bühlmann model (1) 39– 50
De Pril, N., see **J. Dhaene** (2) 181–196
De Schepper, A., M. Teunen and **M. Goovaerts**, An analytical inversion of a Laplace transform related to annuities certain (1) 33– 37
De Waegenaere, A., Equilibria in a mixed financial-reinsurance market with constrained trading possibilities (3) 205–218
Dhaene, J. and **N. De Pril**, On a class of approximative computation methods in the individual risk model (2) 181–196
Dickson, D.C.M. and **A.E. dos Reis**, Ruin problems and dual events (1) 51– 60
dos Reis, A.E., see **D.C.M. Dickson** (1) 51– 60
Goovaerts, M., see **A. De Schepper** (1) 33– 37
Haberman, S., see **M.P. Berg** (1) 19– 32
Haberman, S., Autoregressive rates of return and the variability of pension contributions and fund levels for a defined benefit pension scheme (3) 219–240
Hürlimann, W., A note on experience rating, reinsurance and premium principles (3) 197–204
Lefèvre, C., see **P. Picard** (2) 163–179
Levikson, B. and **G. Mizrahi**, Pricing long term care insurance contracts (1) 1– 18
Mizrahi, G., see **B. Levikson** (1) 1– 18
Panjer, H., see **S. Wang** (2) 129–138
Pedersen, H.W. and **E.S.W. Shiu**, Evaluation of the GIC rollover option (2) 117–127
Picard, P., On some measures of the severity of ruin in the classical Poisson model (3) 107–115
Picard, P. and **C. Lefèvre**, On the first crossing of the surplus process with a given upper barrier (2) 163–179
Shiu, E.S.W., see **H.W. Pedersen** (2) 117–127
Teunen, M., see **A. De Schepper** (1) 33– 37
Vetzal, K.R., A survey of stochastic continuous time models of the term structure of interest rates (2) 139–161
Wang, S. and **H. Panjer**, Proportional convergence and tail-cutting techniques in evaluating aggregate claim distributions (2) 129–138
